EXPERIENCE

Viva Republica (<https://toss.im/>)

Seoul, Korea Jan, 2019 - Present

Have joined one of the *most famous fintech unicorn start-up* in Korea as a *Front-end developer*.

Maintained several products that is built with React JS.

Maintained design system and many kinds of tools that are needed to develop products.

Developed a feature which shows all insurances he has insured. Managed state with MobX.

Developed *Customer Relationship Management* that makes it easier for Finance Consultant to consult with his clients.

So that FC can call a client and send sms on a screen with few clicks. Also can fill out a form easily.

Used React hooks and Context API for managing states.

Working on web application which allows users to trade stocks listed on Korean stock exchanges.

Korbit (<https://korbit.co.kr>)

Seoul, Korea May, 2017 - Jan, 2019

Had joined one of the *most popular crypto currency exchange* in Korea that treats *fiat to crypto markets*.

Maintained the web site that is built with *React JS* and *jQuery*. Improve its performance via applying *selector pattern* and removing jQuery.

Developed *Enhanced Due Diligence* system with third party certification system to meet government and bank's requirement.

Developed all of *business logics* of web & mobile application for crypto currency exchange from scratch myself.

It was built with *Redux* and *Redux Saga*. And the codes were tested with *Jest*. They were guaranteed readability with *eslint*, *prettier*.

Developed open source that is for logging users' actions into *segment*. <https://github.com/wonism/redux-segment-node>

Developed open source that is for making bunches of actions to reduce rendering <https://github.com/wonism/redux-flush>

Improved application's performance with *selector pattern*, *areStatesEqual*, *shouldComponentUpdate* and more.

Made datas to be always up to date via Redux Sags's emitter.

Use *styled-components* for *CSS-in-JS*.

Camscon (<https://camscon.kr/>)

Seoul, Korea Sep, 2016 - Feb, 2017

Developed Camscon web page that is a fashion social network with *React JS* from scratch.

Developed open source that is for authenticating with Korean most popular messenger application Kakaotalk's OAuth for signing feature.

<https://github.com/wonism/react-kakao-login>

Developed features that help user can upload images and its tags, color informations, etc.

Yeastudio

Seoul, Korea Dec, 2015 - Nov, 2016

Developed admin of two kinds of applications (Junimong, Colorfil). They were built with *native JavaScript*. *without any libraries*.

Goodoc (<http://www.goodoc.co.kr/>)

Seoul, Korea Dec, 2014 - Dec, 2015

Joined Goodoc that helps patients to search hospitals easily.

Used Google maps API for the main feature page.

So that users can search hospitals based on his/her current location.

Developed *contents platform* that is called *Goodoc cast*. The platform is similar with *BuzzFeed*.

Developed client/admin page for Goodoc.

Developed *dashboard page* for measuring *marketing performance ratio* using *ChartJS*.
